IN THE LIMELIGHT:

APPLICATIONS OF POLAR DIELECTRICS

In this issue we will focus on what's happening in the field of polar dielectrics. In 1988 Professor Peter Günter (ETHZ, Switzerland) initiated a series of conferences dealing with applications of polar dielectrics. The first European Conference on Applications of Polar Dielectrics (ECAPD) was held in Zürich (Switzerland), followed four years later by ECAPD-II in London, and in 1996 by ECAPD-III in Bled (Slovenia). The next three conferences were held every two years, 1998 in Montreaux (Switzerland), 2000 in Riga (Latvia), and ECAPD-VI in Aveiro (Portugal) in 2002, reflecting the growing interest in this field in recent years.

You will find the titles and authors of the presentations delivered at **ECAPD-VI** on pages 8-12 of this issue. According to the guest editors of the proceedings, published in Volumes 293 - 296 (2003) of the international journal **FERROELECTRICS**, ECAPD-VI attracted close to 130 participants from 22 different countries representing Europe, the United States, Asia, and Latin America. Plenary lectures were given by leading researchers in the field: Prof. N. Setter (EPFL, Switzerland), Prof. Peter Günter (ETHZ, Switzerland), Prof. J. Scott (Cambridge University, UK), Prof. A. Safari (Rutgers University, USA), Prof. J. Fousek (University of Liberec, Czech Republic), Dr. Vakhrushev (Ioffe Institute, Russia), and Prof. Bell (University of Leeds, UK).

The **7th European Conference on Applications of Polar Dielectrics (ECAPD7)** will take place in Liberec (Czech Republic) on 6 - 9 September 2004. For details, please see pages 14 and 15.

Titles and authors of the **Seventh Russian-CIS-Baltic-Japanese Symposium on Ferroelectricity (RCBJSF-7)** presentations are listed on pages 2-7.

In addition to **ECAPD-VI**, the section **UPCOMING MEETINGS** features the **UK Ferroelectric Materials Network Conference** at Cranfield University and six short courses offered by the **American Chemical Society** (p.13).

As usual, the **Calendar of Events** on the back cover of our newsletter provides important information at a glance.

RCBJSF-7 PAPERS

THE SEVENTH RUSSIAN-CIS-BALTIC-JAPANESE SYMPOSIUM ON FERROELECTRICITY (RCBJSF-7)

The Seventh Russian-CIS-Baltic-Japanese Symposium on Ferroelectricity was held in St. Petersburg, Russia, on 24-28 June 2002. Volumes 283, 284, 285, and 286 (2003) of the **FERROELECTRICS** journal, guest edited by **V.V. Lemanov, S.B. Vakhrushev, Y. Uesu, and A. Onodera**, contain papers presented at this symposium.

As noted in the guest editorial, RCBJSF-7 follows a series of symposia on ferroelectricity alternatively held in Russia and Japan since 1976. The first symposium, jointly initiated by Nobel Prize winner Professor A. Prokhorov and Professor J. Kobayashi, was held in Novosibirsk. That and the following symposia (Kyoto-1980, Novosibirsk-1984, Tsukuba-1988, Moscow-1994, and Noda-1998) established scientific cooperation between Japanese, Russian, CIS and Baltic scientists.

Altogether 178 scientists from Russia (99), other CIS countries and Baltic republics (11) including Ukraine, Belorussia, Azerbaijan, Uzbekistan, Estonia, Latvia, Lithuania, and from Japan (54) took part in the Symposium. According to the agreement between the Russian and Japanese sides, 14 scientists from Western Europe (Germany, the United Kingdom, Spain, Portugal, Switzerland, the Netherlands), as well as from Turkey and from the USA also participated in the Symposium, at which 69 plenary lectures and 142 poster reports were presented. Of the presentations, 110 papers have been included in the RCBJSF-7 proceedings.

Subjects covered at the Symposium included advances in theory, phase transitions and critical phenomena, incipient ferroelectrics, relaxors, dielectric and piezoelectric properties, and thin films.

About 10 papers, both theoretical and experimental, deal with results of studies by several research groups of recently discovered oxygen-isotope effects in SrTiO_3 . The isotope effects can be considered as a touchstone of our understanding of the microscopic nature of ferroelectricity in perovskites.

The editorial goes on to state: "A large number of papers are devoted to phase transitions in perovskite and perovskite-like crystals, hydrogen-bonded and organic materials, to studies of LiNbO_3 crystals and mixed valence systems.

Relaxors continue to attract attention of researchers (mainly from Russia). In these proceedings, 14 papers (theory and experiment) are presented on studies of the relaxors.

A considerable part of the Proceedings is devoted to ferroelectric thin films (18 papers), i.e., to integrated ferroelectrics with their promising practical applications."

The next Russian-CIS-Baltic-Japanese Symposium on Ferroelectricity (RCBJSF-8) will be held in Tsukuba, Japan, in 2006.

The following is a list of the authors and titles of the presentations published in the Proceedings.

UPCOMING MEETINGS**UK Ferroelectric Materials Network Conference****14 - 15 June 2004****Cranfield Management Development Centre, Cranfield University, UK**

Cranfield University is pleased to be hosting the UK Ferroelectric Materials Network Annual Conference on 14 and 15 June 2004. Ferroelectric materials are used in a huge range of electronic devices with a world market of tens of billions of dollars per annum. Applications include piezoelectric devices (transducers, sensors, filters, etc.), microwave communications filters, uncooled infrared detectors and imagers, display and other optical devices, memories, and the rapidly growing field of micro-electro-mechanical devices (MEMS). The UK has taken a leading role in the development of many of these and the aim of this conference, which is the fourth in the series, is to provide a platform for displaying the UK's materials research and device developments in this exciting field and a workshop for discussing the direction of the materials' developments.

Topics

- Materials processing
- Materials characterization
- Structure of ferroelectric materials and the relation of structure to properties
- Piezoelectric materials and devices (sound generation/detection, "smart" materials, etc)
- RF materials and devices (SAW, FBAR, resonators, filters, etc)
- Pyroelectric materials and devices
- Electrooptic materials and devices
- Microwave dielectrics and filter devices
- Capacitor dielectrics
- Display applications
- Ferroelectric thin films
- MEMS applications
- Nanoscale effects

UPCOMING MEETINGS

7th European Conference on Applications of Polar Dielectrics (ECAPD7)

6 - 9 September 2004

Liberec, Czech Republic

The European Conference on Applications of Polar Dielectrics (ECAPD) is the major European and international forum to present and discuss recent advancements in the area of polar dielectric materials: basic research, device-oriented research and technology development.

Topics

Materials research of dielectrics

- Single crystals
- Thin films
- Ceramics
- Polymers
- Composites and liquid crystals
- Processing and fabrication technologies

Basic research on application-oriented physical properties of dielectrics

- Ferro-, piezo-, and pyroelectric properties
- Electrooptical and nonlinear effects
- Photorefractivity and photoconductivity
- Ultrasonics
- High T_c superconductivity
- Ionic conductivity
- Microstructure related properties
- Domain engineering

Device research

- Piezoelectric transducers
- Smart sensors and actuators
- Pyroelectric detectors
- Electrooptic modulators and displays
- 2D and 3D optical storage devices
- Optical signal processors
- Optical frequency converters
- Periodically poled ferroelectric devices
- Ferroelectric memories and integrated optical devices
- Microelectromechanical systems

Committees

Honorary Chairman

Prof. Dr. Vojtech Konopa, President of the Technical University of Liberec

Conference Chairman

Prof. Dr. Jaroslav Nosek, Technical University of Liberec

International Advisory Board

F. Agullo-Lopez, University of Madrid, Spain
