

Ferroelectricity Newsletter

A quarterly update on what's happening in the field of ferroelectricity

Volume 9, Number 3

Summer 2001

HIGHLIGHTING FeRAM TECHNOLOGY

As mentioned in the previous issue, we devote the major part of this newsletter to one major conference, the **13th International Symposium on Integrated Ferroelectrics (ISIF 2001)**, held in Colorado Springs, Colorado, on 11-14 March 2001.

The growing maturity of ferroelectric applications is an indication of the high activity in research and commercialization. For example, papers on FeRAM-based smart cards/tags and applications were a highlight of ISIF 2001. You will find the list of oral presentations on this subject on pages 3 and 4, the list of posters on page 10 of this issue.

In this connection, we would like to refer you to the upcoming **1st International Meeting on Ferroelectric Random Access Memories (FeRAM 2001)** to be held in Gotemba, Japan, on 19-21 November 2001. Please turn to page 23 for further information on this conference.

The **14th International Symposium on Integrated Ferroelectrics (ISIF 2002)** takes place in conjunction with two other international meetings dealing with the applications of ferroelectrics, the **International Symposium on the Applications of Ferroelectrics (ISAF XIII 2002)** and the **Meeting on Ferroelectric Materials and Their Applications (FMA XIX 2002)**.

These three conferences will take place simultaneously on 28 May – 1 June 2002 in Nara, Japan, under the title **International Joint Conference on the Applications of Ferroelectrics 2002 (IFFF 2002)**. For contact information, please see the Calendar of Events on page 24.

The second conference we cover in this issue is the **2nd Workshop on Ferroelectrics and FRAM Technology**, held in Yogen, Korea, on 11 November 2000. You will find a list of presentations, both oral and poster, on pages 17-20.

Rounding out the contents of this issue is a report on new publications of the Materials Research Society on pages 21-22.

Rudolf Panholzer
Editor-in-Chief

AMERICAN CHEMICAL SOCIETY SHORT COURSES

In cooperation with Virginia Tech, Blacksburg, Virginia, the American Chemical Society offers the following short courses for polymer chemists and engineers:

- Applied Rheology and Polymer Processing
- Introduction to Polymeric Adhesives and Composites
- Polymer Chemistry: Principles and Practice
- Polymer Characterization: Thermal, Mechanical, and Structural
- Polymer Synthesis: Overview and Recent Developments

FRAM PAPERS

SECOND WORKSHOP ON FERROELECTRICS AND FRAM TECHNOLOGY

The 2nd Workshop on Ferroelectrics and FRAM Technology was held in Yongin, Korea, on November 11, 2000. This workshop was co-organized by the Institute of Electronics Engineers of Korea (IEEK) and by the Pioneering Research Center of System IC 2010, and financially co-sponsored by Samsung Electronics Co., Hyundai Electronics Co. and Ferroelectric Device Laboratory (NRL). The workshop had more than 170 attendees from universities, research centers, as well as semiconductor-business companies including Samsung, Hyundai (currently Hynix), Sunic System and Inostek. A total of 67 papers including two invited papers were presented; 17 and 50 papers were assigned for oral and poster presentations, respectively. Two invited papers were "Inter-Metal Dielectric Process for Double-Level Metallization of Ferroelectric Memory" and "Recent Progress in 1T1C FRAM" presented by Dr. S. K. Hong of Hyundai Electronics Co. and Dr. Kinam Kim of Samsung Electronics Co., respectively.

The scope of the workshop covered all aspects of the ferroelectric technology including material issues, device fabrication, novel characterization, and system integration. All papers were published in the Proceedings of Workshop on Ferroelectrics and FRAM Technology, which was distributed to all attendees. One of the main features of last year's workshop was the active participation of the students: A total of 110 students attended the workshop. This led us to believe that ferroelectric-related research in Korea has a very promising future. Furthermore, the workshop was useful for making personal contacts, which promotes the productive cooperation between attendees: Scientists and engineers had a chance to exchange their recent results in various areas.

The 3rd Workshop on Ferroelectrics and FRAM Technology will be held in Korea; a detailed schedule will be decided at the committee meeting. For further information about this year's workshop, please contact Professor Yonghan Roh, General Secretary, School of Electrical and Computer Engineering, Sungkyunkwan University, Suwon 440-746, Korea, phone: 82-31-290-7134; fax: 82-31-290-5819; e-mail: yhroh@skku.ac.kr

The following is a list of titles and authors of oral and poster contributions presented at the "Workshop on Ferroelectrics and FRAM Technology" held on Friday November 11, 2000, in Yongin, Korea.

DEVICES AND CHARACTERIZATION

Inter-Metal Dielectric Process for Double-Level Metallization of Ferroelectric Memory

S. K. Hong, S. H. Oh, S. W. Lee, C. G. Lee, C. W. Suh, E. Y. Kang, B. Yang, Y. M. Kang and N. S. Kang

The Study of Electrical Properties of SrBi₂Ta₂O₉ Thin Films Depends on the Deposition Temperature and the Substrate Orientation

S. E. Moon, E. K. Kim, S. J. Lee, S. K. Han, W. J. Kim, K. Y. Kang, B. S. Kang, T. W. Noh, S. I. Kwun, H. J. Joo, M. S. Jang, K. J. Han, J. K. Lee, J. G. Yoon and T. K. Song

Enhanced Retention Characteristics of Pb(Zr,Ti)O₃ Capacitor

Kyu-Mann Lee, H. G. An, Y. T. Lee, S. H. Joo, S. D. Nam, J. J. Lee, K. S. Park, M. S. Lee, S. O. Park and Y. W. Park

Study on the Physical and Electrical Properties of MOCVD PZT Deposited Using a Seed Layer

Youngsoo Park, Yongkyun Lee, Junkey Lee, Ilsub Chung, Jungsoo Yong and Eungjik Lee

Characterization of Polarization and Mobile Ion Density in NDRO-Type Memory

K. -H. Kim, Y. Kim, S. Jung, J. Kim, N. Lee and S. -H. Jung

Characteristics of MFSFET Devices with Fatigue Phenomena

G. Lee, S. Kang and Y. -S. Yoon

Keum Hwan Noh, Young Min Kang, Beelyong Yang, Choong Heui Chung, Seaung Suk Lee and Nam Soo Kang

Ferroelectric SrBi₂Ta₂O₉ Thin

FRAM PAPERS

Films by Liquid-Delivery Metalorganic Chemical Vapor Deposition using $\text{Sr}[\text{Ta(OEt}_5\text{)}\text{5(dmae)}]\text{2}$ and $\text{Bi(C}_6\text{H}_5\text{)}\text{3}$

Woong-Chul Shin, Kyu-Jeong Choi, Chong-Man Park and Soon-Gil Yoon

Characteristics of Pt/ $\text{Sr}_0.8\text{Bi}_2.4\text{Ta}_2\text{O}_9/\text{Ta}_2\text{O}_5/\text{Si}$ Structure and the Effect of a Ta_2O_5 Buffer Layer

Hoon Sang Choi, Kun Sang Park, Yong Tae Kim, Seong-Il Kim and In-Hoon Choi

Characterization of Ferroelectric Thin Films Prepared by Liquid Source Misted Chemical Deposition (LSMCD)

Hyun Jin Chung, Suk Jin Chung and Seong Ihl Woo

Direct Liquid Injection Metalorganic Chemical Vaper Deposition (DLI-MOCVD) of $\text{Pb}(\text{Zr,Ti})\text{O}_3$ thin films

Dae-Hwan Kim, Jeong Seok Na and Shi-Woo Rhee

THEORETICAL ANALYSIS AND FUNDAMENTAL PROPERTIES

The Roles of Hydrogen in SiO_2 capped $(\text{Ba,Sr})\text{RuO}_3/(\text{Ba,Sr})\text{TiO}_3$ ($\text{Ba,Sr})\text{RuO}_3$ Capacitor

J. Park, D. Hong, J. Kang, Y. Kim and D. Choi

Raman Study of the Effects of Hydrogen on PbTiO_3 Crystals

H. J. Joo, S. H. Lee, M. K. Ryu, T. K. Kim and M. S. Jang

Giant Grain Growth of Platinum Films for Ferroelectric Applications

Dong-Su Lee, Seung-Hyun Kim, Dong-Yeon Park, Hyun-Jung Woo and Jowoong Ha

Morphotropic Phase Boundaries in Relaxor-based Ferroelectrics

Sang-Jin Ahn and Jong-Jean Kim

Growth and Ferroelectric Properties of Highly Oriented

$\text{Bi}_{3.25}\text{La}_{0.75}\text{Ti}_3\text{O}_{12}$ Thin Films Grown on $\text{Pt}/\text{Ti}/\text{SiO}_2/\text{Si}(100)$ by Metal-Organic Solution Decomposition

Uong Chon, Ki B. Kim, Gyu C. Yi and Hyun M. Jang

POSTERS

Control of Grain-Boundary Location in Ferroelectric Thin Films

Jang-Sik Lee and Seung-Ki Joo

Fabrication and Characteristics of Piezoelectric PZT Cantilever for High Speed AFM

Hyo-Jin Nam, Seong-Moon Cho, Yougjoo Yee, Dong-chun Kim, Jong-Uk Bu and Jaewan Hong

A Study on Growth and Electrical Characterization of $\text{Sr}_x\text{Bi}_y\text{Nb}_z\text{O}_9$ Thin Film by RF Sputtering

Jin Shi Zhao, Hoon Sang Choi, Yong Tae Kim, Kwan Lee and In-Hoon Choi

A Study on Growth and Electrical Properties of $\text{Sr}_2(\text{Ta}_{1-x},\text{Nb}_x)\text{O}_7$ Thin Films by RF Sputtering

Seung-Jin In, Hoon Sang Choi, Kwan Lee and In-Hoon Choi

Characteristics of Metal LiNbO_3 Si

for a Single Transistor FRAM

Bum-Sik Jang, Dong-Gun Lim and Junsin Yi

Application of Pt/RuO₂ Hybrid Electrode to ECR-PECVD PZT Capacitors for FRAM Devices

Hee-Chul Lee and Won-Jong Lee

Fabrication of PZT Thin Film Utilizaing Sol-Gel for Ultra Low Voltage Operation

Yongkyun Lee, Junkey Lee, Changjung Kim, Insook Yi and Ilsub Chung

High Density Plasma Etching of Iridium Thin Film for Ferroelectric Random Access Memory

Dongkyu Lim, IlSub Chung and Chee Won Jung

Low Voltage Performance in $(\text{Pb}_{1-x}\text{La}_x)(\text{ZryTi}_{1-y})_{1-x}/\text{O}_3$ Thin Films

Seung-Hyun Kim, D.-S. Lee, D.-Y. Park, H.-J. Woo, and J. Ha

Ferroelectric $\text{Sr}_2(\text{Nb,Ta})\text{O}_7$ Thin Films Prepared by Chemical Solution Deposition

Chang Young Kim, Chang Young Koo, Dong Chan Woo and Hee Young Lee

Effect of Grain Size of $\text{Pb}(\text{La,Ti})\text{O}_3$ Thin Films Grown by Pulsed Laser Deposition for Memory Device Applications

Chang Hoi Hur and Sang Yeol Lee

Effects of La Concentration in PLZT(x/30/70) Thin Films

S. Kim, S. Kang and Y.-S. Yoon

Fabrication and Characterization of Pt/LiNbO₃/AlN/Si(100) Structure for MFISFET Application

PUBLICATIONS

NEW PUBLICATIONS FROM THE MATERIALS RESEARCH SOCIETY (MRS)

MRS Expands Series on Si Front-End Processing

Newly published by MRS, *Si Front-End Processing: Physics and Technology of Dopant-Defect Interactions II* continues the previous year's front-end proceedings theme by focusing on the formation of electrical junctions in the front-end processing of devices sized for the approaching end-of-the-roadmap. Volume 610 in the MRS Symposium Proceedings Series, the book contains 60 pages and 416 pages.

Materials scientists, silicon technologists and TCAD researchers come together here to share experimental results and physical models that describe phenomena which control the three-dimensional dopant profile. Highlights include a number of industrial papers that focus on future issues in device scaling and how they can be quantitatively linked with the requirements placed on dopant profile and junction formation. Emphasis is on shallow junction depth and high-concentration activation, as well as the extremely tight limits on junction abruptness. An excellent historical overview of the field of implant and annealing in silicon devices is also provided. Topics include: the challenges of device scaling; 2-D dopant characteristics; Si front-end processing; ion implantation and shallow junction technology; group III dopant diffusion and activation; carbon diffusion and interaction with point defects; group V diffusion and activation; vacancy-type defects – interaction and characterization; regrown amorphous layers; and structure and properties of point and extended defects.

Editors: Aditya Agarwal (Axcelis Technologies, Inc.), Lourdes Pelaz (University of Valladolid; Hong-Ha Vuong (Lucent Technologies), Paul Packan (Intel Corporation), and Masataka Kase (Fujitsu Limited).

ISBN: 1-55899-518-8; \$69.00 (MRS members). \$79.00 (U.S. list), \$91.00 (non-U.S. list).

This volume is also available electronically on the MRS website, with free access for all current MRS members.

MRS Publishes New Volume on Vapor Deposition

Vapor deposition is increasingly used to synthesize thin films and coatings that underpin numerous technologies from microelectronics to aircraft engines. As the structural and compositional complexity of the vapor-deposited materials increases, many new methods of vapor deposition have been developed. The design of these new processes and materials is increasingly founded upon a detailed scientific understanding of the atomic-scale mechanisms of growth. Today, the community is beginning to rely more heavily upon the use of models that link these mechanisms to the growth conditions. This new volume from MRS explores these interlinked issues and their applications in micro- and magnetoelectronics, hard coatings, photovoltaics, high-T_c thin films and the group-three nitrides. *New Methods, Mechanisms and Models of Vapor Deposition* is organized so that many of the new methods of vapor deposition are introduced first. This is followed by a series of papers on the mechanisms of vapor deposition including the use of *in situ* characterization techniques to observe them. The volume finishes with papers exploring the application of modeling techniques to simulate the growth of vapor-deposited structures. The use of *in situ* sensors to validate simulations is also widely covered.

Editors: Haydn N.G. Wadley (University of Virginia), George H. Gilmer (Lucent Technologies), and William G. Barker (ITN Energy Systems).

Volume 616 in the MRS Symposium Proceedings Series [IBNS: 1-55899-524-2] documents symposium proceedings from the 2000 Spring Meeting in San Francisco is available in hardcover for \$67.00 (MRS member), \$77.00 (U.S. list), and \$88.00 (non-U.S. list).

This volume is also available electronically on the MRS website, with free access for all current MRS members.

New MRS Volume Explores Evolution of Heteroepitaxial Semiconductor Thin Films

Just published by MRS, *Morphological and Compositional Evolution of Heteroepitaxial Semiconductor Thin Films* documents symposium proceedings from the Spring 2000 Meeting in San Francisco and contains 46 papers, 333 pages.

Strain has a tremendous effect on the morphology and composition of heteroepitaxial semiconductor thin films. Recent progress in strained island formation, and in the morphological and compositional instabilities induced by

PUBLICATIONS

heteroepitaxial stress, has led to new theoretical and experimental advances, as well as to promising materials for various optoelectronic applications. Leading research groups that are focusing on these and related problems come together here to survey the important advances and breaking news in the field. The volume centers around mechanics rather than materials, presenting papers in different semiconductor systems, including SiGe, III-V, nitrides, or II-VI semiconductors. Issues on growth, characterization, and modeling of morphological and compositional nonuniformities are also addressed, as are devices based on these spontaneous structures. Topics include: surface dynamics–atomistic processes; growth on patterned, high-index and vicinal substrates; quantum dots and wires; interdiffusion and segregation; band structure, electronic properties and devices; morphology and microstructure; and nitrides.

Editors: J. Mirecki Millunchick (University of Michigan), A.L. Barabási (University of Notre Dame), N.A. Modine (Sandia National Laboratories), and E.D. Jones (Sandia National Laboratories).

[ISBN: 1-55899-526-9] Volume 618 in the MRS Symposium Proceedings Series is available in hardcover for \$71.00 (MRS members), \$82.00 (U.S. list), and \$94.00 (non-U.S. list).

This volume is also available electronically on the MRS website, with free access for all current MRS members.

Oxide and Metal Epitaxy Examined in New Volume from MRS

Thin-film epitaxy is integral to many current and emerging technologies, and continued progress in solving critical issues is essential to the realization of new devices. This new volume from MRS, *Recent Developments in Oxide and Metal Epitaxy: Theory and Experiment*, focuses on progress in solving fundamental issues in the epitaxial growth of metals and oxides. Presentations cover both fundamental studies and technological applications. Insights from both experiment, and modeling and simulation, are combined to facilitate cross fertilization of ideas and understanding. One highlight is the use of *in situ* characterization techniques for enhancing the efficiency of materials development. Thin-film research is often unavoidably empirical in nature. Techniques for minimizing the time spent exploring the complex parameter space in order to optimize growth and processing conditions are of particular value to the materials scientist. Among the techniques discussed are spectroscopic ellipsometry and ion scattering and recoil spectrometry, LEEM (low-energy electron microscopy), STM (scanning tunneling microscopy), TEM (transmission electron microscopy), and RHEED (reflection high-energy electron diffraction). Topics include: growth and dynamics of metal films; structure and oxidation of metal films and surfaces; *in situ* studies of oxide growth; and epitaxial growth of oxides.

Editors: Mark Yeadon (Institute of Materials Research and Engineering and The National University of Singapore), Shirley Chiang (University of California, Davis), Robin F.C. Farrow (IBM Almaden Research Center), James W. Evans (Iowa State University), and Orlando Auciello (Argonne National Laboratory).

Volume 619 from the MRS Symposium Proceedings Series [1-55899-527-7] documents symposium proceedings from the 2000 Spring MRS Spring Meeting in San Francisco and is available in hardcover for \$63.00 (MRS members), \$73.00 (U.S. list), and \$84.00 (non-U.S. list).

Gate Stack and Silicide Issues in Silicon Processing are Focus of New MRS Volume

The feature size of microelectronic devices is approaching the deep submicron regime. Process development and integration issues related to gate stack and silicide processing are key challenges. Gate leakage rises sharply due to direct tunneling. Power and reliability concerns are expected to limit the ultimate scaling of SiO₂-based insulators to about 1.5nm. Topics in *Gate Stack and Silicide Issues in Silicon Processing* include: high-k materials; novel gate insulators; novel gate structures; advanced gate dielectrics; integration issues in the FEOL; novel silicide processing; silicide formation mechanisms; shallow junctions and silicides; and epitaxial silicides.

Editors: L.A. Clevenger (IBM Corp.), S.A. Campbell (University of Minnesota), P.R. Besser (Advanced Micro Devices, Inc.), S.B. Herner (Matrix Semiconductor), and J. Kittl (Texas Instruments, Inc.). [1-55899-519-6]

Volume 611 in the MRS Symposium Proceedings Series is available in hardcover for \$67.00 (MRS members), \$77.00 (U.S. list), and \$88.00 (non-U.S. list).

UPCOMING MEETINGS**1st International Meeting on Ferroelectric Random Access Memories (FeRAM 2001)**
19 – 21 November 2001
Keidanren Guest House, Gotemba, Japan**Scope**

FeRAM 2001, the first international meeting on ferroelectric random access memories, will be held on 19 – 21 November 2001 at Keidanren Guest House at Gotemba in the Shizuoka prefecture, Japan. Sponsored by the Research and Development Association for Future Electron Devices (FED), FeRAM focuses on materials, processes, devices, circuits and applications of ferroelectric random access memories. The meeting features active in-depth discussions. Distinguished scientists from all over the world will give lectures on the topics listed below. Contributed papers will be presented mostly in poster form. Authors of contributed papers will also be given a chance to make short oral presentations. Extended abstracts will be published and distributed to the participants at the conference. No on-site registration can be accepted.

Topics

- Materials and deposition techniques
- Modeling and theory for FeRAM materials
- Characterization
- FeRAM device integration and fabrication
- Devices and circuits
- Ferroelectric field effect devices
- Testing and reliability
- FeRAM-based applications

Organizing Committee

Chairperson:

- Y. Yasuda (Nagoya University)

Members:

- H. Ishiwara (Tokyo Institute of Technology)
- H. Hayashi (Nikkoi BP, Inc.)
- M. Ishikawa (ULVAC Japan Ltd.)
- T. Nakamura (Fujitsu Labs Ltd.)
- M. Okuyama (Osaka University)
- E. Takoda (Hitachi Ltd.)
- G. Yamanaka (Mitsubishi Elec. Corp.)
- S. Inouo (Kanto Chem. Co. Inc.)
- M. Matsuura (Sharp Corp.)
- H. Okumura (FED)
- H. Takasu (ROHM Co. Ltd.)
- K. Takeya (NTT Corp.)
- K. Yodoshi (Sanyo Co. Ltd.)

CALENDAR OF EVENTS 2001

Aug 5-11	<ul style="list-style-type: none"> • 8th International Conference on Ferroelectric Liquid Crystals (FLC 2001), Washington, D.C., USA (see <i>Ferroelectricity Newsletter</i>, Vol. 8, No. 3, p. 34)
Aug 12-16	<ul style="list-style-type: none"> • 13th American Conference on Crystal Growth and Epitaxy, Burlington, Vermont, USA (see <i>Ferroelectricity Newsletter</i>, Vol. 9, No. 1, p. 26)
Sep 3-7	<ul style="list-style-type: none"> • 10th International Meeting on Ferroelectricity (IMF-10), Madrid, Spain (see <i>Ferroelectricity Newsletter</i>, Vol. 8, No. 3, p. 35)
Nov.19-21	<ul style="list-style-type: none"> • 1st International Meeting on Ferroelectric Random Access Memories (FeRAM 2001), Gotemba, Japan (see p. 23)
Nov 26-30	<ul style="list-style-type: none"> • 2001 MRS Fall Meeting, Boston, Massachusetts, USA (see <i>Ferroelectricity Newsletter</i>, Vol. 9, No. 2, p.15)
Dec 3-6	<ul style="list-style-type: none"> • “Advanced Materials for Noveel Microwave Deviceds” at the 2001 Asia-Pacific Microwave Conference (APMC 2001), Taipei, Taiwan (see <i>Ferroelectricity Newsletter</i>, Vol. 9, No. 1, p. 27)
<h2 style="margin: 0;">2002</h2>	
May 28- Jun 1	<ul style="list-style-type: none"> • International Joint Conference on the Applications of Ferroelectrics 2002 (IFFF 2002), Nara, Japan International Symposium on the Applications of Ferroelectrics (ISAF XIII 2002) International Symposium on Integrated Ferroelectrics (ISIF XIV 2002) The meeting on Ferroelectric Materials and their Applications (FMA XIX 2002) Contact: Prof. Tadashi Shiosaki fma@ms.aist-nara.ac.jp; website: fma.aist-nara.ac.jp
